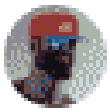
ON-CHAIN & ANECDATA

- How Thorchain Works (& Why You Can't "Launder" On An Open, Transparent Blockchain) >> x.com/_alreadysold



curb
@CryptoCurb

"so you staked your ETH on the Ethereum blockchain to earn yield?"

"yes, Dave"

"except you didn't want your capital to be locked up so you actually staked it with a liquid staking protocol called Lido?"

"that's correct, Dave"

"and Lido gave you a liquid staking receipt token called stETH in return?"

"yes, Dave"

"and then you didn't think that was enough, so you juiced the yield even further by depositing your stETH receipt tokens into a restaking protocol called Eigenlayer?"

"you are correct, Dave"

"and now you didn't want to lock up your capital, so you actually restaked with a liquid restaking protocol called KelpDAO who provided you with a liquid restaking receipt token called rsETH?"

"you got it, Dave"

"and then that was surely not enough juice, so you then deposited your rsETH tokens into a lending protocol called AAVE so that you could open a leveraged looping position that borrows ETH against the rsETH collateral and restakes the ETH into rsETH which is then deposited as collateral, except it turns out rsETH used a cross-chain bridge called LayerZero whose security is held together by a 1/1 toothpick, which was obviously hacked by north koreans causing rsETH to become

undercollateralized and now these looping positions are stuck and unprofitable, and everyone is pointing fingers at each other, and also DeFi is a very serious industry"

"you are 100% correct, dave"

JUST IN: TRON Founder Justin Sun files lawsuit against Trump Family's crypto project World Liberty Financial.

"They wrongfully froze all of my tokens, stripped me of my right to vote on governance proposals, and have threatened to permanently destroy my tokens."

H.E. Justin Sun
@justinsuntron

Today, I filed a lawsuit in California federal court against World Liberty Financial to protect my legal rights as a holder of $WLFI tokens.

I have always been—and remain—an ardent supporter of President Trump and his Administration's efforts to make America crypto friendly. This lawsuit does not change how I feel about President Trump or the Trump Administration.

Unfortunately, certain individuals on the World Liberty project team have been operating the project in a manner that goes against President Trump's values. They wrongfully froze all of my tokens, stripped me of my right to vote on governance proposals, and have threatened to permanently destroy my tokens by "burning" them—all without any proper justification. I do not believe President Trump would condone these actions if he knew about them.

I have tried in good faith to resolve this situation with the World Liberty project team without resorting to litigation. But the project team has refused my requests to unfreeze my tokens and restore my rights as a token holder. They have left me with no choice but to turn to the courts.

All I want is to be treated the same as every other early investor who received tokens—no better, no worse.

I also want the community to know that I strongly oppose the new governance proposal World Liberty published on April 15.

If it passes, token holders who do not "affirmatively accept" its terms—including a requirement that 10% of all advisor tokens be permanently

burned—will have their tokens locked indefinitely.

For early purchaser tokens, the proposal imposes a two-year cliff followed by a two-year vesting schedule—and again, for those who do not affirmatively accept, their tokens are locked indefinitely.

This proposal is bad for the community, but because World Liberty has frozen my early investor tokens, I cannot vote them for or against the proposal.

I believe in fairness, transparency, and the principles that make crypto powerful. I will continue to fight for those principles. 🙏

@JoshKale

Anthropic said Mythos was too dangerous to release. Then four random guys in a Discord gained access on day one by guessing the URL...

This is pretty insane:
→ Group in a private Discord guessed the endpoint from Anthropic's naming conventions
→ They figured out the conventions from the leak in the Mercor breach three weeks ago
→ Used a contractor's legit eval credentials to walk in
→ Have been using it ever since to build simple websites

The AI that finds zero-days in every operating system on earth was defeated by address bar autocomplete... big yikes

Bloomberg @business · 13h
Anthropic's Mythos has been accessed by a small group of unauthorized users, raising questions about control of the AI model

José Maria Macedo
@ZeMariaMacedo

For years, saying you were doing a token got you an automatic valuation premium. This pulled in a lot of teams that had no real reason to be in crypto

First time ever I'm seeing the opposite rn. Teams building similar products in outside crypto are raising at a massive premium to their crypto counterparts

One obvious example is "agentic trading". @TrueNorth has built one of the best products I've seen in the category anywhere. Meanwhile comparable non-crypto teams are raising at $200-300m caps either pre-product or with materially worse products

2026 will go down as a generational

opportunity to back the best crypto-native teams building products with universal appeal

Bloomberg
@business

The hack that drained nearly $300 million from a small crypto project and triggered a $10 billion run on the largest decentralized lending platform could slow Wall Street's growing interest in blockchain technology, according to Jefferies

Brian Armstrong
@brian_armstrong

The Finding Satoshi documentary is the most thoughtful take on this subject I've seen out there.

It's coming out tomorrow, but Coinbase users can get early access today. Open your Coinbase app to find out more!

thorchain ($RUNE) just processed $176m in DPRK-linked exploit funds from ETH to BTC and the token is up 6.7% on the day. market is pricing pure utility at $0.45 with zero regulatory premium baked in. now monero integration launches may 10 with FROST threshold signatures enabling atomic ETH to BTC to XMR swaps. no KYC, no admin keys, no bridge contracts to freeze, 105 distributed nodes. this is the tornado cash test on steroids except thorchain is embedded in trust wallet, ledger, OKX, and bitget serving millions of users. too integrated to sanction cleanly, too effective at laundering to ignore. RUNE is the highest convexity vol setup in crypto right now. if privacy infra gets legitimized you own the cross-chain backbone. if treasury moves first

you're holding the next sanctioned protocol. may and june will resolve this and the current price reflects neither outcome.

THORChain
@THORChain

THORChain was modelled after Bitcoin, to be permissionless and censorship resistant.

There's no single person or entity in control of the protocol. There's no admin key. There's no 2-of-3 multisig. Currently, there's 95 nodes spread globally that control the network. For the network to change a two thirds supermajority have to agree, resulting in a 64-of-95. No one can override that.

Bitcoin is neutral because the code is neutral, and the nodes enforce it.

THORChain is neutral because the code is neutral, and the nodes enforce it.

It would have been nice to get this attention in any other context. WikiLeaks has kicked the hornet's nest, and the swarm is headed towards us.

Joel Valenzuela
@TheDesertLynx

I don't even swear on here, but all the dishonesty, cope, avoiding responsibility, and bullying THORChain and other DEXes for not censoring people's transactions made me go on a bit of a rant.

If you're going to do TrustMeBroFi, get rekt.

Sorry not sorry. Decentralize or GTFO.
